

DIBBLE'S PRICE LIST

from

Edward F. Dibble Seedgrower, Honeoye Falls, N.Y.

March 6, 1958

To our customers and friends:

Dibble's Price List was recently mailed to you and we now send you a new Price List quoting today's prices. There are not many changes since our first Price List except in potatoes.

Potatoes have advanced, due to shorter supplies, and the outlook for the marketing season from the twenty-four late States indicates a very strong market for the balance of the season.

Most of the grasses, legumes and grains are sharply lower than they were a year ago, which should increase demand.

HAVE YOU FIGURED ALL YOUR SEED REQUIREMENTS?

The days are getting longer and the planting season will be near at hand. Farm seeds should be on the farm well in advance of planting time.

We can ship all seeds except seed potatoes at once, and can hold potatoes until weather conditions are favorable, or, we will be glad to book your order to be called for at our Warehouse.

The duty of our Company is plain and simple - to furnish seeds we are proud to sow ourselves.

May we furnish you with the farm seeds you are going to need.

Sincerely yours,

EDWARD F. DIBBLE SEEDGROWER

Harwood Martin

HARWOOD MARTIN, PRESIDENT

Officers:

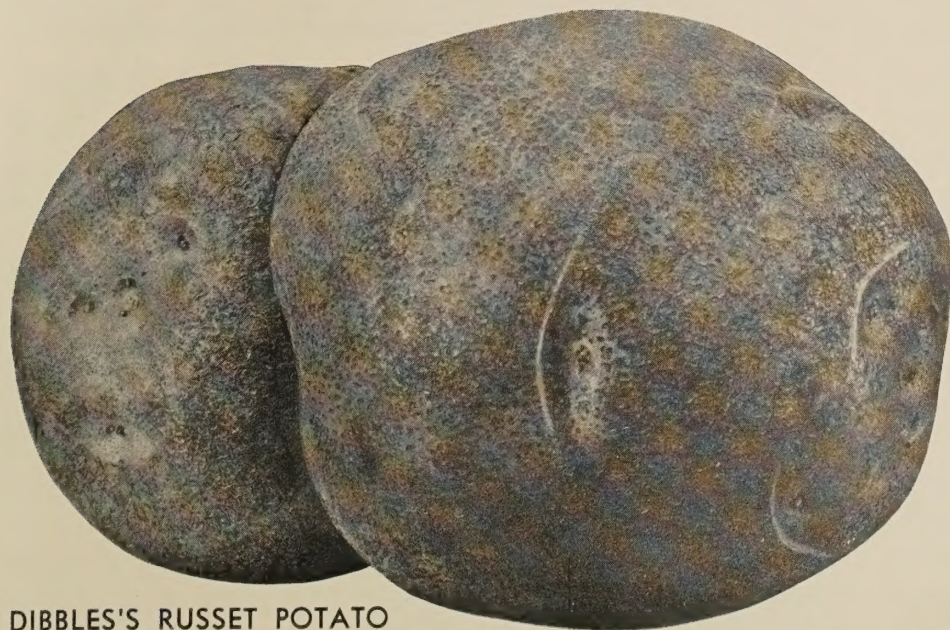

HARWOOD MARTIN, President and Treasurer

DEAN G. MARTIN, Vice-President

RALPH E. MARTIN, Secretary

Conditions of Sale

We assume responsibility that the seeds or tubers reach the purchaser in good condition. We offer to refund the purchase price of any seeds or tubers found by tests to be unsatisfactory to you within ten days after the seeds or tubers reach you. In common with all responsible seedmen "The Edward F. Dibble Seedgrower Company warrants to the extent of the purchase price that seeds or tubers sold are as described on the containers within recognized tolerances. Seller gives no other or further warranty express or implied."

ALFALFA SEED

NARRAGANSETT

NARRAGANSETT ALFALFA is a new Northeastern-bred variety which has the widest soil and management adaptation of any alfalfa recommended for the Northeast.

On soils of marginal drainage for alfalfa - Narragansett, compared with other varieties, establishes better stands that live for years.

Narragansett, if properly limed and fertilized, can extend successful alfalfa production to many farms with moderately drained soils.

Because of inferior seed-setting ability, Narragansett seed supplies are far from adequate to meet the present demand. Supply is short.

Narragansett is not wilt-resistant, therefore should be used in short rotations (three to five years.).

RANGER

RANGER ALFALFA, a long-lived Alfalfa, is highly resistant to bacterial wilt. It is winter hardy and is therefore well suited to our Northeastern conditions where a long-lived stand is desired. We recommend Ranger as the variety to use where wilt may be a factor, and if you wish to leave the seeding for a period of several years.

VERNAL

VERNAL ALFALFA, is a high-yielding winter-hardy, wilt resistant variety that was developed in Wisconsin. Recommended for the same conditions as Ranger, or as a substitute for Narragansett. VERNAL may replace Ranger when ample seed supplies are available.

DU PUIITS

DUPUIITS ALFALFA, is of French origin and the highest yielding variety on the fertile soils of the Northeast for stands up to three years. Dupuits starts growth earlier in the spring, recovers faster and continues growth later in the fall than other recommended varieties. On three cuttings (starting late May or early June) over five tons per acre may be expected. Successful stands of Dupuits have been established on soils of moderate drainage.

COMMON

COMMON ALFALFA, may be used on natural Alfalfa soils of the East where Common Alfalfa has grown successfully and and where it is to be left down only two or three years.

DIBBLE'S *Garry Oats*

High Yielding Variety for the Northeast.
The Most Promising New Oat.

The new Garry Oat originates from the Dominion Laboratories at Winnipeg, Canada and this is the third year that seed has been available to our Northeast farmers.

The Garry Oat combines in one variety the following desirable features:

1. High yielding ability.
2. Very stiff straw.
3. Medium height.
4. Medium early maturity.
5. High resistance to crown and stem rust.
6. Plump, meaty kernels.

The Garry Oat has exceptional stooling ability and maximum yields may be obtained by planting 2 bushels per acre.

RODNEY

Rodney, a Canadian-bred oat has proven to be a very desirable Oat for our Northeast territory. Rodney yields about the same as the new Garry and has about the same height and stiffness of straw. It is five days later than Garry and has a very heavy kernel. Rodney has excellent resistance to the races of rust which are now prevalent. Sow 2 to 2½ bushels per acre.

CRAIG

Craig is a high yielding short strawed variety that was released from Cornell in 1951.

It is the best oat among the short strawed varieties. Sow 2 to 2½ bushels per acre.

Maturity Guide

FOR DIBBLE'S SEED CORN

EARLY
100 to 110 days

N. E. 310
Michigan 250
Cornell M-1

Mainly for grain production in New York State above elevations of 600 feet and early to medium seasons of the Northeast. Excellent for early silage producers.

MEDIUM
110 to 115 days

Cornell M-4
Penn. 444

For grain in the good growing sections of western New York State and similar seasons of the Northeast. Excellent yields for silage at elevations around 800 feet in New York State and similar seasons of the Northeast.

MEDIUM LATE
115 to 125 days

Ohio K-62
Ohio K-24

Extremely heavy silage producers for the good Corn-growing dairy sections in New York State and the Northeast. For grain in the best Corn-growing sections of the Lower Hudson, Long Island, Pennsylvania, New Jersey and Connecticut.

LATE
130 days

West Branch Sweepstakes
Leaming
Lancaster County Sure Crop

Open-pollinated varieties that produce high yields of silage in the best growing sections of the Northeast.

MATERIALS FOR SEED TREATMENT

NOD-O-GEN

The Pre-Tested Inoculator

Use NOD-O-GEN on all legumes.

1. Bigger crop yields (10 to 50%).
2. Build more protein in hay and forage.
3. Add valuable nitrogen to your soil.

When ordering cultures specify kind of seed to be inoculated.

4 oz. Seneca Carmelcross	75 days	
½ lb. Seneca Chief	86 days	

Plant all three at the first planting and then follow with Seneca Chief at weekly intervals.

SENECA BEAUTY, SENECA CARMELCROSS, SENECA CHIEF.

1 to 4 lbs. \$1.05 per lb., 5 to 9 lbs. 75c per lb., Prepaid
10 to 19 lbs. 70c per lb., Prepaid.
20 lbs. or over 60c per lb., Not Prepaid.

HAY and PASTURE MIXTURES

BIRDSFOOT TREFOIL - GRASS MIXTURE

This mixture is suitable for long rotations and for areas to be left continuously in hay or pasture. It is recommended only where the seeding is to be left down for three years or longer.

For Hay, Silage or Pasture	
Birdsfoot Trefoil	7 lbs. or 3½ quarts
Timothy	5 lbs. or 3½ quarts
Total for 1 acre	12 lbs. or 7 quarts

This mixture should not be sold mixed. Birdsfoot Trefoil seed should be inoculated with the proper nitrogen-fixing organisms and mixed with the Timothy seed immediately before sowing.

We furnish inoculation with each purchase of Trefoil.

Empire Trefoil is first choice for long-term stands on acres difficult to plow or for continuous grazing. It will also cut high-quality hay from 10 to 20 days later than Red Clover or the European type.

European or Viking Trefoil is better suited for hay and may be used for rotated pastures. Hay yields higher than Empire and matures at time of Red Clover; establishes itself quicker and recovers faster after cutting.

GENERAL-PURPOSE MIXTURE

For Hay, Silage or Pasture	
Alfalfa	4 lbs. or 2 quarts
Medium Red Clover	4 lbs. or 2 quarts
Ladino Clover	1 lb. or ½ quart
Timothy	6 lbs. or 4 quarts
Total for 1 acre	15 lbs. or 8½ quarts

The proportion of Alfalfa should vary from 6 to 2 pounds according to how favorable the situation is for Alfalfa. As the Alfalfa is reduced, the Clover should be increased correspondingly.

Eight pounds of Brome Grass, sown separately, may be used in place of Timothy when most of the soil is well drained.

For Hay or Silage	
Alfalfa	8 lbs. or 4 quarts
Timothy	6 lbs. or 4 quarts
Total for 1 acre	14 lbs. or 8 quarts

Timothy is more easily and quickly established than Smooth Brome Grass on land that is not in a high state of fertility.

For Hay or Silage	
Alfalfa	8 lbs. or 4 quarts
Smooth Brome Grass	8 lbs. or 18 quarts
Total for 1 acre	16 lbs. or 22 quarts
